

Individual Contributions

Jack: Saving contracts to the database works with POST /contract (this action is done on the /contractform page). I also did the initial database setup.

Michelle: Converted GET /user/userid/privateprofile and PUT /user/userid/privateprofile/edit along with the accompanying helper functions. Responsible for Private Profile.

Eric: GET /contracts and GET /contracts/searchTerm. Responsible for search page.

Dan: GET /user/:userid/publicprofile and PUT /user/:userid/publicprofile. Responsible for Public Profile.

Chandler: GET /contract/:contractid. Responsible for contract page.

Lingering Bugs / Issues / Dropped Features

Jack: I still need to redirect to the page of the contract that is being saved, once it is saved. As of right now you simply get a message saying 'it worked'

Dan: Post review is currently throwing a 500 error, which I need to look into. Also, I need to put in a way to rate users when writing reviews (as the rating right now is static), and there should be something that checks a user against a profile id to decide whether to return private or public profiles.
